

Industry Leading Protection, Control and Automation Products & Systems

Enable the world's utility and industrial power grids to operate efficiently, reliably and securely.

With over 100 years of experience in delivering innovative solutions for protecting, and managing power system assets, GE's products and systems greatly increases the reliability, efficiency and security of the electrical infrastructure.

With over one million Multilin products installed worldwide, we bring industry-leading experience to solve customer problems

Grid Automation

Multilin™

Product Portfolio

Protection & Control Relays

Enhanced system reliability & security with high speed devices and tools

Automation Gateways

Seamless & scalable solution with Gateways, RTUs & Ethernet Switches

Asset Monitoring and Diagnostics

Proactive asset maintenance with Relays with build-in monitoring & diagnostic intelligence.

Industrial Digital Meters

Monitor & optimize energy usages wit power monitors to advanced power quality meters

Fault Sensors

Real-time information on line outages & available capacity with advanced fault indicators

Solution Portfolio

Substation Projects

Complete turnkey EPC transmission & distribution solutions

Automation Projects

Integrated packaged solution with protection & automation for all kinds of electrical substations

Industrial Energy Management

Customers more efficiently energy use with fully integrated energy management system

Power Energy Consulting Services

Experienced engineer teams for wide range of protection & automation consulting services

Advanced Training Services

In-class , on-site & interactive treaning CDs in power system protection, automation and control.

Maximizing Grid Reliability, Efficiency, Security & Operational Excellence
