

SUBNET Continuous Current Evolution Software Maintenance Program

Isolate From Change

Centrally Manage Change

Simplify Your Life

Technology changes are expensive and unpredictable. Continuous Current Evolution (CCE) protects your system, your time, and your budget from change. SUBNET products help avoid costly per device changes by isolating end devices from change. CCE helps you centrally manage the unavoidable changes you do need.

The Economics are Simple

- Your CCE investment is significantly less than purchasing software upgrades for new features
- With CCE your software upgrades are free

Budgeting is Simple

- Fixed, predictable maintenance costs
- Free Engineering services to help manage change
- No more waiting on PO approvals and budget cycles for every little change

Membership is Simple

- Annual CCE membership is based on your current SUBNET inventory
- Memberships renew on an annual basis
- Additional substation level software purchased during the year is covered automatically at no extra cost

The SUBNET product family is designed to isolate substation devices from change.

- Evolving NERC CIP requirements
- Extended features for existing IEDs
- Password management
- Settings change detection
- Configuration management
- Evolving remote access security
- Virus protection updates
- Cyber-attack protection
- Access logging
- and the list keeps growing ...

CCE controls the cost and complexity of the changes you do need.

SUBNET Continuous Current Evolution

So much more than a maintenance program

There are areas of substation technology that utilities cannot simply lock down to prevent change. In these areas the SUBNET CCE software maintenance program protects your entire substation automation system with the latest security patches and device management technology. You need to stay current, and CCE with SUBNET products is the easiest way to do it.

CCE Benefits

CCE includes benefits designed to help manage the costs of staying current. CCE protects much more than your SUBNET product investment. It protects the investment in your entire substation control system.

- **Priority help desk support**
- Free Engineering services*
- **NERC CIP security notifications, upgrades & hot fixes**
- Unlimited software upgrades (including O/S upgrades)*
- **Unlimited license transfers to approved hardware**
- Extended warranty when you upgrade to a new major version
- **Extended Engineering services terms**
- Training & user group discounts
- **5 year price guarantee (with a multi-year PO)**

Our Unique Business Model

Technology upgrades are driven by many things including new standards, regulatory requirements, competition, obsolescence and the increasing need for continuous security updates. For most vendors this represents an opportunity to sell more devices.

At SUBNET our mission is to isolate existing substation devices from continuous change by handling as much of that change as possible with servers and software programs designed specifically for that purpose.

SUBNET is the only major substation server provider whose underlying business model is to isolate substation devices from change and extend their life rather than find ways to justify replacing, upgrading and delivering more devices.
